Instructions of Spin Display APP

Introduction

Thank you for selecting our products, for a better using experience, please read this guide carefully before using it.

Rotating screen, which implied by the name is to use the persistence of vision in the human eyes, through a series of high-density LED rotating to images, then perform the three-dimensional visual effect. The device is characteristic of borderless vision, high brightness, low power consumption, also easy to install and carry. It can be widely used in exhibitions, shops, malls, cinemas, airports, hotels, and other crowded areas for advertising.
Product List

Mainframe*1   Light Emitting Diode Strips*4

Power Adapter*1   Power Line*1

Remote Control*1   Fixing Bracket*1

Screw Bag*1   Manual*1

## Product Parameter

Input Power: AC100~240V/50~60Hz   Operating Voltage: DC24V

Rated Power: 96W   Operating Temperature: -20~60 degrees

Audio Output: support   Multiple Splicing: support

Support Format: mainstream video and image formats such as MP4/MPEG/AVI/JPG

Support Application: IOS/ Android/Personal Computer Win7/8/10

Install

1.Select the installation location, first install the fixing bracket, the spacing between the holes is shown below.

2.Install the light strips, simultaneously press the safety buckle on the both sides of the arm of mainframe, then insert the light strip A or B into the light arm, remember to check whether the safety buckle is completely sprung and locked. Danger alert: If the safety buckle is not locked, the light strip will be thrown out.

Safety buckles up means locks down

3.After inserting the light strip, hang the mainframe on the bracket which just installed, then screw on a locking screw, installation is completed, as the picture below.
Using Method

1.Connect the power, four light strips are on, running in the form of a lantern. The default is the power-up device does not rotate, it is controlled by remote control or connections with application.Please scan the code to download the application.

2.Start the application (As shown in figure 1), for the first time, keep the phone connecting with internet, ensure the application is the latest version. Open the application, click on the "design" window. While seeing the three-dimension text sphere and other templates updated, it means the application is the latest version. (As shown in the figure 2) (Take the android for example, same to the IOS)
